Little Parts. Big Difference.

Shockonloc®

Shockonloc® series

The Secret of Toughness

Outerwear and other outdoor gear are often exposed to severe natural conditions. Their buckles must endure the same! Once again, YKK ensures they do. Because YKK fasteners don't just meet expectations. They exceed them. The newly developed Shockonloc® brand buckle from YKK is the first to provide such assurance. YKK and its raw material supplier have developed a high-grade Acetal specifically for the physical challenges of the outdoor environment. This material combined with YKK's unique design dramatically increase the strength and durability against impact. Shockonloc® resists water absorption often caused by high humidity and its properties are stable under extreme temperatures such as mountain-top cold or desert heat. YKK's new Shoconloc® brand buckle. High performance and quality you can count on when you need them most.

Features

1. Strong Tape Grip & High Releasing Angle
2. Impact Absorbing Design and All Poly Acetal Material
3. Break Resistant
4. Vertical Engagement System (YKK Patented)
5. Wide Opening

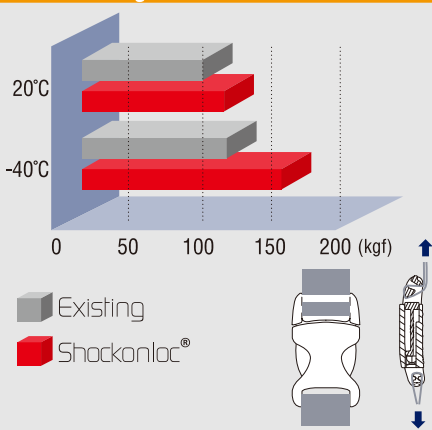

Stress Analysis

To develop a buckle that successfully resists shock, we had to analyze its characteristics under extreme stress. Now, after many simulations and much study, we proudly introduce Shockonloc®. The new, high-performance buckle you can count on outdoors. From YKK.
